***Make sure to provide your contact information at end of survey if you would like the project team to follow up with you about your needs.**

Proposed Bikeway Design Alternatives

The Beach Street Quick-Build will at minimum include baseline intersection safety improvements along the entire corridor and a placemaking/pedestrian priority zone on Beach Street from Hyde to Larkin.

The SFMTA is also proposing bike network improvements on Beach Street. Specifically, the project proposes a low stress, protected bike lane from Powell Street to Columbus Avenue, with potential connections to Larkin at the western end of the corridor, and connections south to the existing bike facility on North Point Street.

The SFMTA would like to get your input on options for the bikeway design.

The following questions ask for your input on the two proposed design options for the bikeway on Beach Street.
