## Introduction

This Appendix presents the key findings and describes the methodology and assumptions behind the Benefit-Cost Analysis (BCA) for the 16<sup>th</sup> Street Multimodal Corridor TIGER FY 2014 grant application. The analysis and findings are based on research and analysis conducted by a team of technical consultants with input and direction from the SFMTA.<sup>1</sup>

As illustrated in Exhibit 1, the factors evaluated in this BCA specifically address the key selection criteria identified in the Department of Transportation's (DOT) Notice of Funding Availability (NOFA) for the TIGER FY 2014 grant. For example, the net economic benefits associated with reduced travel time directly address the "economic competitiveness" criteria.

Long-Term Outcome	Types of Societal Benefits	Monetized in CBA
	Land Use Changes that Reduce VMT	No
Livability	Increased Accessibility	No
	Property Value Increases	No
	Travel Time Savings	Yes
Economic Competiveness		
	Operating Cost Savings	Yes
Safaty	Prevented Accidents (Property	Yes
Safety	Damage), Injuries, and Fatalities	fes
	Deferral of Complete Replacement	No
State of Good Repair	Maintenance & Repair Savings	Yes
	Reduced VMT from Not Closing	Ne
	Bridges.	No
Environmental	Environmental Benefits from	Yes
Sustainability	Reduced Emissions	162

Figure 1: Summary of BCA Analysis

<sup>&</sup>lt;sup>1</sup> The consultant team includes Economic & Planning Systems (EPS), a land use economics consulting firm, Industrial Economics, Incorporated (IEc), an applied economics firm with a specialization in regulatory analysis, and Fehr & Peers, a transportation planning and traffic engineering consulting firm.

## Analytical Framework

This BCA compares the "social" costs associated with TIGER projects with the "social" benefits and, to the extent possible, monetizes the net impact based on a "net present value"<sup>2</sup> calculation. "Social" costs and benefits refer to the actual gains or losses to society as a whole as opposed to transfers of goods and resources from one group or region to another. The BCA calculation only includes factors where both costs and benefits can be effectively monetized based on best practices defined by DOT's. Project-related costs or benefits that cannot be monetized have been excluded from the formal BCA calculation but discussed qualitatively throughout this application.

DOT directs applicants to measure costs and benefits of the proposed project against a "baseline," defined as the way the world would look if the project did not receive the requested TIGER FY 2014 funding. This BCA compares three alternative scenarios that are designed to reflect costs and benefits in a world "with" and a world "without" the proposed TIGER VI funding. The definition and key analytical assumptions of these two scenarios is described below.

### No Project Baseline

This alternative assumes the existing Fillmore trolley bus route remains with no physical street improvements or rerouting of the service. No complimentary shuttle service is assumed.

### Shuttle Alternative

The 22 Fillmore trolley coach service would run from the current northern terminus to Kansas Street (route distance 4.62 miles one-way). The Shuttle motor coach service would run from the 16th Street/Mission Street intersection to Third Street, and north to the turnaround at Mission Bay Boulevard North and South (route distance of 2.19 miles one-way).

The 33 Stanyan trolley coach service, rerouted as described in the Transit Effectiveness Project along the former 22 Fillmore route east of Kansas (route distance of 7.38 miles one way).

No physical improvements or rerouting of the service is included.

### 16 Street Corridor Multimodal Project ("Preferred Project")

The 22 Fillmore trolley coach service from the current northern terminus, down 16th Street to Third Street, and north to the turnaround at Mission Bay Boulevard North and South (route distance of 5.65 miles one way). No shuttle service is included.

The 33 Stanyan trolley coach service would be rerouted as described in the Transit Effectiveness Project along the former 22 Fillmore route east of Kansas (route distance of 7.38 miles one way).

<sup>&</sup>lt;sup>2</sup> A net present value calculation accounts for the economic effects associated with differences in the timing of gains and losses (e.g. delayed costs or accelerated benefits are more valuable). Specifically, this analysis applies an annual discount rate of 7 percent to costs and benefits that accrue over time (as required by DOT, a 3 percent discount rate is also included to test the sensitivity of our results to the selected rate).

All capital improvements on 16th Street from Church to Third as described in the 22 Fillmore Travel Time Reduction Proposal, including transit-only lanes, sidewalk extensions or bus bulbouts, pedestrian bulb-outs, new and upgraded signals, Pedestrian Countdown Signals, highvisibility crosswalks, landscaping and innovative storm-water management infrastructure..

## Summary of Findings

**Tables 1** through **3** summarize the monetized costs and benefits from the Preferred Project and Shuttle Alternative, respectively, for a 20 year time-frame. Future costs and benefits have been discounted back to a net present value estimate based on a 7 percent and 3 percent discount rate.

Long-Term outcome	Types of Societal Benefits	Monetized Benefit
State of Good Repair	Maintenance & repair savings	Not monetized
Economic Competitiveness	Travel time savings	\$25.7 to \$46.3
		million depending on
		discount rate
Environmental Sustainability	Environmental benefits from reduced	Not monetized for
	emissions	Preferred Project
Safety	Prevented accidents (property	\$42 to \$74 million
	damage), injuries, and fatalities	depending on
		discount rate
Total Monetized Benefits		\$ 67.7 to \$120.3
		million depending
		on discount rate
Total TIGER Project Cost		\$ 67,138,614

Table 1Summary of Benefits for Preferred Project

Current Status / Basleine & Problem to be Address	Change to Basline / Alternatives	Type of Impacts	Population affected by impacts	Economic Benefits	Summary of Results
Poor Connectivity and unsafe conditions for pedestrians and transit riders	Provide a variety of safety improveements and improve transit route	Improve safety, pedestrain and transit accessibility	8,000 + transit riders and pedestrians	Monetized value of reduced travel time and iinjury / fatality prevention	\$2.7 million to \$32 million in net benefits (after accounting for project costs) over 25 years

### Table 3 Summary of BCA Analysis for the Shuttle Alternative

This section estimates the transportation time savings for transit riders along the 16<sup>th</sup> Street corridor. These estimated time savings are monetized based on DOT guidance for the value of personal and business related commutes. The analysis excludes the potential vehicle commute time savings associated congestion relief created by the added transit service and improved bicycle/pedestrian facilities included in the project.

## Travel Time Savings Context

According to data from the SFMTA, the 22 Fillmore currently accommodates approximately 8,000 trips. This number is expected to grow in the future due to significant land use expansion along the corridor, most notably in Mission Bay. When fully built, Mission Bay will include a new campus of the University of California San Francisco (UCSF), future sites of three hospitals primarily serving children, women and cancer patients. In addition, the Golden State Warriors have announced the purchase of waterfront property for a new 18,000 seat professional basketball arena near the proposed 22 Fillmore terminus at the east end of 16th Street.

Development in Mission Bay, even without the new arena, is expected to create more than 6,000 housing units and 32,000 jobs in addition to nearly nine million square feet of educational, research and development, and office space.

To help catalyze Mission Bay development, the Department of Transportation is investing \$10,000,000 in Fourth Cycle TIGER funds for an array of street and light rail infrastructure investments. The 16th Street Project will build on that investment to provide a direct link from Mission Bay to jobs, residencies and regional transit options to the west.

The 16th Street Corridor is currently served by the 22 Fillmore transit route. Carrying over 8,000 weekday customers, the route operates at an average speed of 7 miles per hour during peak periods. This slow speed is due in large part to closely spaced stops and traffic. Vehicle congestion and transit delays are anticipated to grow substantially in tandem with the development along the corridor, further slowing transit service.

Additionally, narrow sidewalks, a lack of street trees, and several unsignalized and complex intersections make the corridor difficult and unpleasant to navigate on foot.

In sum, over 43,000 people (51% minority, 25% low-income) live within a quarter-mile of the project area. Approximately 2,800 businesses employing over 23,000 individuals also call the area home. The proposed project will connect and engage these communities to improve reliability, travel time, safety, and accessibility for all regardless of mode of travel. It will also provide ladders of opportunity in the form of better transportation choices, whether people choose to walk, bike or take transit.

## Travel Time Savings Calculations

The travel time savings calculated herein are based on (1) improved travel times for the 22 Fillmore, (2) expanded transit ridership due to population and employment growth, (3) expanded transit ridership due improved transit service, including more frequent and efficient service, and (4) the proposed route change which brings transit riders closer to key origins an destinations along the Corridor, most notably in Mission Bay. The key travel time savings are summarized as follows.

Alternatives	Extents	One-way travel time for length of route	One-Way Travel time savings from "No Project"
No Project	current travel time for 22 Fillmore from Bay/Fillmore to 20 <sup>th</sup> /3 <sup>rd</sup> , T Third from 20 <sup>th</sup> to UCSF/Mission Bay stop, plus transfer time	64 min	-
55 Shuttle	travel time for the 22 Fillmore from Bay/Fillmore to Kansas, the motor coach service from 16 <sup>th</sup> /Mission to Mission Bay Terminal, plus transfer time	63 min	1 min
Preferred Project	travel time for the full length of the new route, Bay/Fillmore to Mission bay Terminal	54 min	10 min

The ridership changes are summarized as follows based on transportation model forecasts the project; other rates based on rates for similar projects in San Francisco.

- No Project: 1% (just growth)
- 55 Shuttle: 1.2% (growth + service to Mission Bay)
- Preferred Project: 1.6% (growth + service to Mission Bay + transit network improvements and lack of transfer)

The key assumptions underlying the time savings calculations are also summarized in Table 4.

Assumption	22 Fillmore
Project Completion (1st year of benefits)	2020
Baseline Average Daily Ridership <sup>1</sup>	
Weekdays	8,000
Saturday (@ 73% of weekday)	5,840
Sunday (@ 69% of weekday)	5,520
Annual Average Growth in Ridership <sup>1</sup>	
No Project (Baseline Growth)	1.0%
55 Shuttle Alternative	1.2%
16 <sup>th</sup> St. BRT Project	1.6%
Ridership by Type	
Personal	95.4%
Business	4.6%
Time Value Assumptions / Hour	
Personal	\$12.42/hr
Business	\$25.23/ hr
Average Time Savings on Route (one-way) <sup>1</sup>	
No Project	0
55 Shuttle Alternative	1 minute
16 <sup>th</sup> St. BRT Project	10 minutes
Average Time Savings / Rider on Transit <sup>2</sup>	
No Project	0
55 Shuttle Alternative	.5 minutes
16 <sup>th</sup> St. BRT Project	5.0 minutes

### Table 4 Key Assumptions for Transit Rider Time Savings

[1] Estimate for the portion of the route to be affected by improvements only.

[2] Assumes the average rider benefits from 50% of the oneway trip time savings (i.e. 1/2 of a full one-way trip).

Sources: SFMTA; DOT

The monetization of the travel time benefits for both the 16<sup>th</sup> Street BRT Project (Preferred) and 55 Shuttle Alternative are calculated in **Table 5** and **Table 6** respectively.

### Table 5 22 Fillmore Transit Travel Time Savings Benefit Calculation

[1] Average daily ridership counts passengers based on number of boardings, therefore, one passenger round-trip would be counted as a ridership of 2, one boarding for each leg of the trip, to- and from. Ridership is projected to increase at an average growth rate of 1.6% per year or an annual total of 4.03 million by 2039.

[2] Calculation of average daily ridership on weekends:

			Daily	
	Days per	% of	Ridership	
	Year	Weekday	in 2014 Data source and notes	
Weekday	253	100%	8,000 SFMTA	
Saturday		73%	5,840 SFMTA	
Sunday		<u>69%</u>	<u>5,520_</u> SFMTA	
Avg. Weekend	112	71%	5,680	

[3] Based on 253 days of weekday operations and 112 weekend days of operations.

[4] Based on a total route one-way-trip reduction of 10 minutes (or 5 minutes), and assumes the typical passenger-trip is 50% of one-way route length.

### Table 6 Shuttle Transit Travel Time Savings Benefit Calculation

[1] Average daily ridership counts passengers based on number of boardings, therefore, one passenger round-trip would be counted as a ridership of 2, one boarding for each leg of the trip, to- and from. Ridership is projected to increase at an average growth rate of 1.2% per year or an annual total of 3.58 million by 2039.

[2] Calculation of average daily ridership on weekends:

			Daily
	Days per	% of	Ridership
	Year	Weekday	in 2014 Data source and notes
Weekday	253	100%	8,000 SFMTA
Saturday		73%	5,840 SFMTA
Sunday		<u>69%</u>	<u>5.520</u> SFMTA
Avg. Weekend	112	71%	5,680

[3] Based on 253 days of weekday operations and 112 weekend days of operations.

[4] Based on a total route one-way-trip reduction of 10 minutes (or 5 minutes), and assumes the typical passenger-trip is 50% of one-way route length.

Sources: San Francisco Metropolitan Transit Agency; U.S. Department of Transportation, 2014 TIGER BCA Guide.

## 3. AIR EMISSIONS COSTS

Both the Preferred Project and Baseline alternatives assume zero emission transit vehicles for the 22 Fillmore routes. Consequently, this BCA has not calculated any emission reduction benefits associated with the Preferred Project relative to the Baseline. To the extent that the bicycle and pedestrian improvements included in the 16<sup>th</sup> Street Corridor improvements lead to mode shift away from vehicles, this assumptions represents an underestimate of actual emission reductions that might result.

However, the costs of additional air emissions are calculated for the Shuttle Alternative since this represents the introduction of a biodiesel motor coach to operate transit service along the corridor. The assumptions and calculations for the likely emission costs associated with this alternative are provide in **Table 7** and **Table 8** below.

	Types	of Emission	s		
Item Description	Volatile Organic Compounds (VOCs)	Nitrogen Oxides (NOx)	Particulate Matter (PM)	Total Costs (2013\$)	Data Source
Values (\$2013)					
\$ / metric ton	\$1,999	\$7,877	\$360,383		TIGER BCA Guide
Annual Transit Vehicle Emissions

### Table 8 Annual Social Costs of Emissions under the Shuttle Alternative

[1] Refer to Table 7 for calculation of annual undiscounted social costs in 2013 dollars.

The 16<sup>th</sup> Street Corridor project includes a variety of elements or "counter-measures" that are designed to improve the overall safety for pedestrians, bicyclists, and motorists, and others. This analysis provides a quantitative estimate of the benefits from improved safety based on DOT guidance related to the monetizing the value associated with reduced injuries and fatalities. Given lack of available data the analysis has not estimated benefits from reduced property damage impacts.

The analysis is based primarily on accident data on the 16<sup>th</sup> Street Corridor gathered as part of the WalkFirst project.<sup>3</sup> This data documents significant safety concerns along this corridor, with approximately 117 injury pedestrian accidents and 3 fatalities from 2007 through 2011. Note that two of these fatalities involved automobiles and the other a pedestrian and auto. With the exception of the two auto fatalities, all other auto related injuries (and property damage) are excluded from the analysis due to data limitation. **Appendix B** provides detailed accident data.

The SFMTA has converted the accident data described above into to DOT accident categories and values based on DOT guidance, as summarized in **Table 9** below.

### Table 9 Conversion of Accident Data Into DOT Injury/Fatality Categories

			US DOT VSI, Guidance, 2013							
SWITRS Collision Severity	,	us Collision Severity (ex injury)	Value of a Statistical Life (VSL), 20135	Fraction of VSL	Value of Injury Prevention	Fraction of VSL - Aggregated	Value of Injury Prevention - Aggregated			
0 - property damage only										
4 - injury - complaint of pain	4	1 minor (superficial laceration)	\$9,200,000	0.003	\$27,600	0.003	\$27,600			
3 - injury - other visible	3	2 moderate (fractured sternum)	\$9,200,000	0.047	\$432,400	0.047	\$432,400			
	2	3 serious (open fracture of humerus)	\$9,200,000	0.105	\$966,000					
2 - injury - severe		4 severe (perforated trachea)	\$9,200,000	0.266	\$2,447,200	0.354	\$3,260,020			
		5 -critical (ruptured liver with tissue loss)	\$9,200,000	0.593	\$5,455,600					
1 - fatal	11	6 maxknum/fatal	\$9,200,000	1.000	\$9,200,000	2.000	\$9,200,000			
		9 not further specified								

Notes:

Value of a Statistical Life (VSL) is defined as the valuation of reductions in risk - an additional cost that individuals would be willing to bear for improvements in safety that, in aggregate, reduce the Value of injury prevention for SWITRS collision severity 2 calculated as weighted average of AIS severity 3-5 values based on AIS collision severity frequency from SF General Hospital trauma center

The analysis also relies on Crash Reduction Factors developed by the Federal Highway Administration. A Crash Reduction Factor (CRF)<sup>4</sup> is the percentage crash reduction that might be expected after implementing a given countermeasure. A summary of the academic literature as it pertains to the street improvement planned for the 16<sup>th</sup> Street Multimodal Corridor project is provide in **Table 10**.

<sup>&</sup>lt;sup>3</sup> WalFirst is a collaborative effort of the San Francisco Office of the Controller, SFMTA, SF Planning Department and the SF Department of Public Health. Note that two of the fatalities are based on data from The Statewide Integrated Traffic Records System (**SWITRS**), a database that serves as a means to collect and process data gathered from a collision scene...

<sup>&</sup>lt;sup>4</sup> Report No. FHWA-SA-07-015. U.S. Department of Transportation, Federal Highway Administration. September 2007

	Evalu	ation so	urces				Imp	act Categ	jory		
Countermeasure	FHWA Toolbox	SFMTA CM Summary	PBIC Literature Review	Crash Modification Factor (proportion expected to remain) Source: FHWA Toolbox	Other Quantifiable Measures of Effectiveness Source: SFMTA CM Summary, PBIC Lit Review	High	Med	Low	N/A		Research Notes
Signalization	_		_						_	_	
Ped countdown heads	x	х		0.75	22% reduction	х				н	Reduction in ped collisions noted here (also evaluated for all red-light-running traffic collisions); Sources are consistent
Leading ped phase/Leading pedestrian intervals (LPI)	x	x	х	0.95	12% reduction		x			м	SFMTA, reduction for ped/left-turn conflicts in NYC; effective for decreasing collisions and severity, especially with heavy turn volumes and adopted as CM in NYC, and 3-second LPI makes ped crossing easier
Improve signal timing (to match ITE specified intervals);	х	х		0.63		х				н	From FHWA and SFMTA
Add new traffic signals at unsignalized	х			All crashes -			х			м	From FHWA
intersections when warranted Accessible Pedestrian Signals (APS)		х	х	.75	drop in late ped crossing from 27% to 17%			х		1	Focus on decrease in late crossings (not reduction in crashes)
Geometric										-	
					14% and 7% decreases in speeds; reduced						
Corner bulb outs		х	х	-	overall severity rate, statistically significant increase in yielding and increase in yielding distance		x			М	PBIC Lit Review - recommended to enhance pedestrian safety
Chokers/ curb extensions		x	x	-	14% and 7% decreases in speeds; reduced overall severity rate, statistically significant increase in yielding and increase in yielding distance		x			М	PBIC Lit Review - recommended to enhance pedestrian safety
-	X	X	Х	0.44 All crashes -						н	
-	х			.75 0.54 - marked	36% reduction; 23% reduction when converting					0	PBIC Lit Review - recommended to enhance pedestrian safety, associated with significantly lower rate of ped crashes on multi-
Pedestrian refuge islands/raised median	х			crosswalk	painted median to raised refuge island	х				0	lane roads with either marked or unmarked crosswalks,
	х			0.61 - unmarked crosswalk						0	especially on roads with 15,000 ADT
Raised crosswalks	х	х	х	All crashes - .70; Fatal64	69-91% improvement in driver yielding behavior		х			м	
Speed tables	х	х	х	All crashes - .70; Fatal64	69-91% improvement in driver yielding behavior		х			М	
Narrow roadway cross section from 4 to 3 lanes/ Road diets	х	х		All crashes - .71	29-53% reduction	х				н	CMF applies to "All crashes", rather than Ped only
Bus bulb outs, and other traffic calming near transit boarding		x	х	-	NA				0	0	Evaluation in SFMTA summary focused on travel time savings; PBIC lit review notes, "No information for this section" under Transit Stop Improvements and Access to Transit headings
Curb ramps				-				х		L	Increases accessibility; ADA compliant curb ramps provide detectable warning and allow pedestrians to access crosswalks without moving into line of traffic
Removal of multiple turn lanes									0	0	Recommend grouping this countermeasure with road diet
Rumble strips Signs, Markings, Operational										0	No evaluation source
No left turn	х	х		0.90	10% reduction		х			М	SFMTA, 10% reduction in ped collisions; FHWA and SMTA sources are consistent
Segment lighting	x	x		All crashes - .80; Injury77	42% reduction at midblock, 79/42% reduction in fatal/injury	x				н	CMF applies to "All crashes", rather than Ped only: SFMTA, refers to FHWA and NCHRP. Noted that in SF most high ped volume streets have lighting, so option would be to enhance lighting, and no data are available about such improvements
High-vis crosswalk (includes continental crosswalks)	x		x	0.52		x				н	PBIC Lit Review conflicts with FHWA toolbox - group with all other crosswalks, as study found no statistically significant differences in ped crash risk for different crosswalk types (main differences noted when paired with other treatments such as signs and beacons)
Right turn pockets									0	0	Noted in feedback from SFDPH, used in the TEP; this may be more focused on reducing transit delay
Increase enforcement (along corridors for yielding in marked crosswalks)	х			0.77		х				н	From FHWA
High-vis crosswalk in conjunction with illuminated			х		8-40% improvement in driver yielding behavior	x				н	High visibility crosswalks improve crosswalk safety more when
overhead crosswalk sign Speed humps and other traffic calming		x			(8% at night, 30-40% during daylight) 25% decrease in speeds, 5-50% reduction in crashes on urban/suburban roads		x			м	paired with illuminated pedestrian crossing signs AASHTO research variability suggests increase or decrease in collisions; FHWA evaluation for all crash types and severity types suggest collision reduction of 40-50%
Portable Speed Trailer/and Radar speed display signs		x			change from 68-83% driver yielding at downstream crosswalks, reduced speeds 1-6 mph		x			М	From FHWA study
Street trees		x							0	0	Texas study found that tree-lined streets cause motorists to drive more carefully/slowly; Toronto study found 5-20% reduction in mid-block vehicle collisions in areas with trees or planters; no findings related to pedestrian collisions

### Table 10 Summary of Academic Literature on Counter Measure Safety Effectiveness

 Notes:

 Crash Modification Factor (CMF) is the proportion of crashes that are expected to *remain* after the countermeasure is implemented, as defined in the FHWA Toolbox of Countermeasures Impact categories - High, Med. Low, NA:

 - High:::measures than 10% pedestrian crash reduction if known

 - Medium:: known improved ped experience or driver yielding/compliance (includes speed reduction), less than 10% pedestrian crash reduction if known

 - Low: possible improvement, unknown impact

 - NA = no direct impact on collisions

Based on this analysis EPS assumed that the collective impact of the safety improvements planned for the corridor would reduce accidents rates by roughly 40 percent over baseline conditions. Although it is difficult to estimate this value with precision given the wide variety of factors involved in particular location, the accident reduction for many of the countermeasure include in the 16<sup>th</sup> Street Multimodal Corridor Project exceed this level. The combined effect of implementing a number of them in a complimentary fashion along an entire corridor is likely to have added advantages. It is also worth noting that use of historical data from a five year period is considered conservative since, as traffic volumes increase due to corridor growth, the number

of collisions and other vehicle and pedestrian accidents is likely to increase relative to baseline conditions.

The monetized value of prevented accidents and fatalities is presented in **Table 11**.

Injury Severity	Total Injuries <sup>1</sup>	Annual Injuries <sup>1</sup>	Value of Injury Prevention - Aggregated <sup>2</sup>	Baseline Annual Loss	Annual value of Prevented Injuries / Fatalities @ 40% reduction in corridor accident rate [3]
4	72	14	\$27,600	\$397,440	\$158,976

### Table 12 Discounted Value of Reduced Fatalities/Injuries

[1] Refer to Table 11 for calculation of annual undiscounted social costs in 2013 dollars.

This section describes the BCA analytical assumptions for both one-time capital and on-going operating and maintenance cost associated with the  $16^{th}$  Street Corridor Multimodal project and the Shuttle Alternative relative to the "No Project Alternative". A summary of the cost assumptions is provided in Table # below.

Cost Category	Calendar Year	No Project		16 <sup>th</sup> St. BRT Project
One-Time Capital Costs Soft Costs				
Planning & Environmental Studies	2014	-	-	\$1,802,379
Conceptual Engineering	2015	-	-	\$2,523,330
Detailed Design	2016	-	-	\$5,407,137
Pre-Development	2017	-	-	\$720,952
Construction <sup>1</sup>				
Year 1	2018	-	-	\$28,342,408
Year 2	2019	-	-	<u>\$28,342,408</u>
Total Capital Costs		\$0	\$0	\$67,138,614
Change in Annual Operating Costs		\$0	\$9,622,107	\$2,437,057
(Relative to "No Project" Baseline)				

### Table 13 Project Cost Summary

[1] Includes construction support and contingency.

### **One-time Capital Costs**

The detailed schedule for the 16<sup>th</sup> St. Multimodal Corridor Project is summarized below.

Milestones	Start	End
Planning & Environmental Studies	May 2014	June 2015
Conceptual Engineering	January 2015	May 2016
Detailed Design	June 2016	July 2017
Advertise & Award Contract	August 2017	January 2018
Construction	February 2018	January 2020

The one-time capital costs estimates are detailed in **Table 14** below.

## Table 14 Detailed Capital Costs for 16<sup>th</sup> Street Multi-Modal Corridor

	#	Unit	Unit Cost	Project Cost Estimate
TRANSIT ENHANCEMENTS				\$ 10,144,720
Transit Bulbs/Sidewalk Improvements	21	Each	\$ 118,000	\$ 2,478,000
OCS Ductbank Underground	1	Mile	\$ 3,150,000	\$ 3,150,000
OCS -foundation and poles	1	Mile	\$ 1,367,300	\$ 1,367,300
OCS - overground	1	Mile	\$ 3,149,420	\$ 3,149,420
OCS - Caltrain Crossing*	1	Ĩ	TBD	\$ O
STREETSCAPE ENHANCEMENTS				\$ 6,105,000
Streetscape elements on bulbs (Greening)	21	Each	\$ 75,000	\$ 1,575,000
Pedestrian Bulb Outs	8		\$ 50,000	\$ 400,000
Accessible Curb Ramps	26		\$ 5,000	\$ 130,000
Pedestrian Scale Lighting, Trees and Landscaping	1		\$ 4,000,000	\$ 4,000,000
ROADWAY IMPROVEMENTS				\$ 3,900,000
Repave Potrero to 7th Street	240,000	Sq. Ft.	\$ 5	\$ 1,200,000
Transit-Only Lanes (in red), Final Striping, bike lanes on 17th Street	500,000	Sq. Ft.	\$ 1	\$ 500,000
Traffic Signal Upgrade	5	Each	\$ 200,000	\$ 1,000,000
New Traffic Signal	4	Each	\$ 300,000	\$ 1,200,000
UTILITY RELOCATION				\$ 11,196,000
Sewer	1	mile	\$ 3,696,000	\$ 3,696,000
Water	1	mile	\$ 2,500,000	\$ 2,500,000
Emergency Auxiliary Water Supply System	1	mile	\$ 5,000,000	\$ 5,000,000
Others- Allowance, mob/demob, hazard material management, traffic control, permits (15%)				\$ 4,701,858
Hard Costs TIGER Project				\$ 36,047,578
SOFT COSTS				
Environmental & Planning Outreach 5%				\$ 1,802,379
Pre-development 2%				\$ 720,952
Conceptual Engineering Report 7%				\$ 2,523,330
Detail Design 15%				\$ 5,407,137
Construction Support 20%				\$ 7,209,516
Soft Cost TIGER Project				\$ 17,663,313
Project Contingency 20%				\$ 13,427,723
Total TIGER Project				\$ 67,138,614

## **On-going Costs**

The on-going O&M costs are based on typical fully loaded per hour operating costs for the type of transit vehicles included in each alternative, as calculated in **Table 15** below.

### Table 15 Transit Vehicle Operating Hours and Costs

	1943122-002-0022-00	Service Route	Costs <sup>1</sup>			
Peoject Alternative	22 Filmore	33 Stanyan	55 - Shuttle	Total	Daily	Annual
No Project						
Weekday	333	155	0	488	\$72,341	\$18,302,303
Weekend	236	110	0	346	51,362	\$12,994,635
					\$123,703	\$31,296,939
55 - Shuttle Alternative						
Weekday	294	186	138	618	\$94,582	\$23,929,266
Weekend	209	132	98	439	67,153	\$16,989,779
					\$161,735	\$40,919,045
16th BRT Project						
Weekday	352	174	0	526	\$77,974	\$19,727,483
Weekend	250	124	0 0	373	55,362	\$14,006,513
					\$133,336	\$33,733,995

[1] Based on fully loaded NTD Operating Expense / Revenue Hour of \$169.76 for Motor Coach (22 Filmore and 33 Stanan), and for \$148.24 Trolley Coach (Shuttle), as reported by the SFMTA

This analysis calculates the project costs for the Preferred and Alternative projects as changes from the baseline.
