

New Transit Bulbs at Sloat Blvd

- Transit bulbs reduce delays by eliminating the need for buses to merge in and out of traffic at transit stops.
- Bulbs make it easier for everyone to get on and off the bus by letting the doors line right up with the curb.
- Bulbs provide additional space for transit shelters and people walking along the street or waiting for the bus, and they make crossing the street easier by reducing the distance between curbs.

New Pedestrian Bulbs at Wawona St, at Sloat Blvd and at Ocean Ave

- Improves pedestrian safety by reducing the street crossing distance, increasing visibility between pedestrians and vehicles, and slowing turning vehicles

Remove Stops at Wawona St and at Ocean Ave

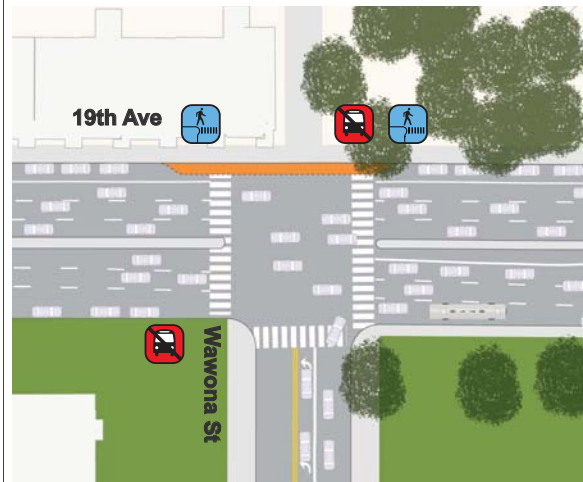

Fewer stops along the route means Muni can travel the same distance in less time, allowing Muni to get you where you want to go faster and more reliably. The maximum distance proposed between stops is two blocks.

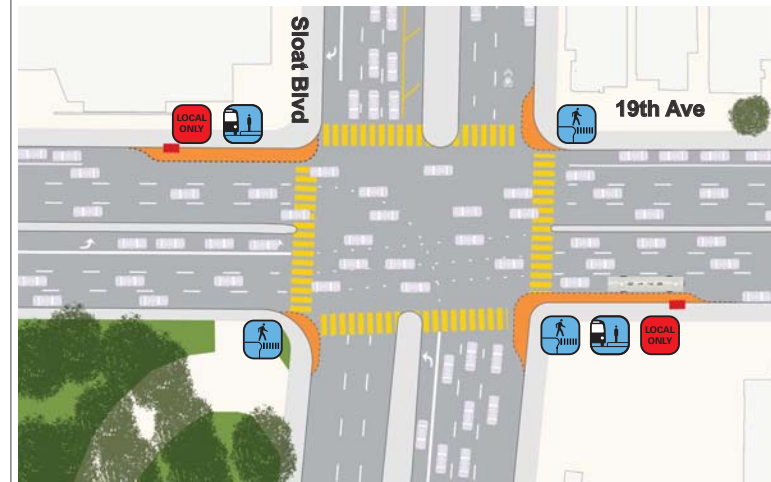

Remove Rapid Stops at Sloat Blvd

Fewer stops along the route means the 28L can travel the same distance in less time, allowing the Rapid service to get you where you want to go faster and more reliably. 28 local service will still stop at this location with increased frequency.
