

Sustainable Yard

The SFMTA bus facility will support electric trolley buses and have infrastructure to transition to a future battery-electric bus fleet, as needed. This project would allow Muni to continue as a national leader in delivering sustainable transit service and puts it on the cutting edge of a 100 percent zero-emissions future.

Transit-Dense Community

The Project is conveniently located to public transit and bike networks within a 5-minute walk, reducing the need for personal automobile use and associated carbon emissions.

Green Corridor

A natural extension of Franklin Square Park, enhanced landscaping will be provided at the street level and throughout the Project.

Water Reuse

The Project would include flow-through planters, bioswales, and stormwater storage tank to meet anticipated non-potable water demands. The Project would include flow-through planters, bioswales, and stormwater storage tank to meet anticipated non-potable water demands.

Improved Energy Efficiency

This project provides new charging infrastructure for a growing all-electric fleet.

The U.S. Green Building Council developed the Leadership in Energy and Environmental Design (LEED) rating system to encourage building design, construction, and operation that prioritizes environmentally and socially responsible, healthy, and prosperous places.

Potrero Neighborhood Collective's commitment to sustainability includes a strategy to achieve LEED Gold rating.
