Voice Annunciator Volume and Aisle Safety Light Brightness

SFMTA Fleet Engineering

Voice Annunciator Volume

- Voice announcements are handled by the coach's Clever Devices announcement system.

Municipal Transportation Agency

Voice Annunciator Volume

Voice Annunciator Volume

- Our current voice annunciator system has an AGC (“Automatic Gain Control”) feature which controls the volume automatically.
 - SFMTA has deployed this technology since late 90’s.
- SFMTA will be changing to a new voice annunciator system in the near future by using the Harris Radio System.

Aisle Safety Light Brightness

- Aisle lights come on when the front doors open
- New buses have a glare shield fitted on the lights to prevent blinding

Aisle Safety Light Brightness

- SFMTA is investigating options to outfit older buses with the glare shield
- Why hasn't the glare shield been put on older coaches yet?
 - Installation currently may require major disassembly of the bus.
